The course deals with the trading of commodities as well as their sophisticated form of investment. This type of trading has many similarities to the stock market, the biggest difference being the asset being traded. Commodity trading focuses on the market and trading of products rather than shares of the company.

Commodities are traded on stock markets where investors negotiate the purchase or trading of products in an attempt to make a profit from fluctuating market prices or because they need the product in question. In the recent years, there has been a great deal of use of futures as a collateral, which are secured by assets. Commodity markets may include transactions in the physical delivery of the good but foreign exchange derivatives using spot prices, futures, forward and options contracts. The aforementioned derivatives are either traded on the stock market or OTC.

Students after successful completion of the course will have:

- 1) Knowledge of commodities
- 2) Knowledge of freight trading
- 3) Knowledge of the derivatives used
- 4) Have the ability to analyze investment strategies
