

Shipping Operations

The main purpose of the course is to introduce students to the issues of shipping operations. The course analyzes the procedures to be followed by all parties involved, the crew, the land office, and those involved in the ports. The aim is the safe and efficient operation of ships. Different types of cargo and ships, freight management, emergency response (fire, ship abandonment) as well as basic ISM, ISPS codes and international conventions such as STCW are being considered.
