

## **Supply Chain Management**

The course introduces the basic concepts and tools used in modern Supply Chain Management. It covers issues related to supply chains such as the scheduling, planning, and operational needs of transportation systems as well as the coordination of means in intermodal and multimodal supply chains. Particular emphasis is placed on the strategic role of Supply Chain Management as well as on optimizing the level of service to the customers.

**ECTS: 4**

**Lectures: 7**
